MARINA IMMO DUBAI — PRODUCTION OPERATIONS SETUP

The Cobbler's Children Get Shoes.

You built a 35-minute, 8-deliverable production pipeline for paying clients and you are not running your own channel through it. This document fixes that. Every screen, every template, every Make scenario, every Castmagic prompt — built specifically for Marina Immo Dubai.

CURRENT PRODUCTION TIME / VIDEO	AFTER THIS SETUP	OUTPUT PER EPISODE
3–5 hours (estimated)	**35 minutes**	**10+ deliverables**

FREQUENCY POSSIBLE

3–4 videos / week

---

00 — THE GAP

What is probably happening now vs. what should be

CURRENT REALITY

- ✗ **3–5 hours** editing one video manually
- ✗ **No consistent template** — different look each episode

AFTER THIS SETUP

- ✓ **35 minutes total** from raw file to all deliverables published
- ✓ **Marina Immo Master Template** —

- ✗ **No subtitles** — invisible to non-French YouTube search
- ✗ **Show notes written manually** — or not at all
- ✗ **One piece of content per shoot** — no repurposing
- ✗ **Reels done separately** — another 1–2 hours
- ✗ **Thumbnail takes 30+ min** — starting from scratch each time
- ✗ **No automatic newsletter** — written from scratch weekly
- ✗ **Lives are archived** but never clipped into content
- ✗ **Upload frequency: irregular** — 1–2 per month at best

identical look, every episode

- ✓ **French + English subtitles auto-generated** — 2× SEO reach
- ✓ **Show notes, blog, 10 social posts** auto-generated in French
- ✓ **10+ pieces of content** from every single shoot
- ✓ **5 branded Reels auto-generated** by Opus Clip
- ✓ **Thumbnail in 5 min** — swap photo + title in template
- ✓ **Newsletter drafted automatically** from Castmagic output
- ✓ **Lives auto-clipped** into 5–8 Shorts via Opus Clip
- ✓ **Upload frequency: 3–4 per week** — sustainable cadence

THE REAL COST OF NOT DOING THIS

At 1 video per month, it takes 3 years to build the content library needed to rank on YouTube search. At 3 videos per week using the pipeline, you build the same library in 12 weeks. **The bottleneck has never been ideas or time in Bali. It has been production friction.** Remove the friction and the channel velocity multiplies by 12. The pipeline pays for itself in month one.

01 — FIELD SETUP

Before you press record in Bali

0

ON LOCATION — BALI

File naming and simultaneous capture

Time: **0 minutes** — discipline, not effort

The pipeline only works if files arrive named and organized correctly. One bad naming decision costs 20 minutes of confusion later. Set this as a non-negotiable personal SOP from your first Bali shoot.

FILE NAMING CONVENTION — MARINA IMMO DUBAI

```
# Format: Channel_EpisodeType_Location_Number_Date

Studio talking-head:   MID_Studio_Explainer_001_20260610
Property walk-through: MID_Bali_PropertyVisit_007_20260612
Developer interview:   MID_Bali_DevInterview_003_20260613
Live stream archive:   MID_Live_BaliUpdate_020_20260614
B-roll footage:        MID_BROLL_Uluwatu_20260612

# MID = Marina Immo Dubai
```

Primary camera (studio)	Sony FX30 — already in DPS. 4K/25fps, S-Cinetone, Eye AF on.
Field camera (Bali walks)	Sony ZV-1 II for handheld property walk-throughs. Or iPhone 16 Pro — acceptable for B-roll and Reels raw footage.
Audio on location	Rode Wireless GO II clipped to lapel for all talking-to-camera property commentary. Never rely on camera mic in Bali wind.
Google Drive folder structure	`/MarinImmo/[Year]/[TripOrEpisode]/Raw/` — all files upload here. Make watches this folder.
Record simultaneously	For property walk-through episodes: run both FX30 (wide) + ZV-1 II (close-up detail shots) simultaneously. DaVinci multi-cam sync handles it in 2 clicks.

02 — EXPORT & ORGANIZE

1

STEP 1 — ON ARRIVAL HOME OR BACK AT DPS

Dump files. Trigger the pipeline.

Time: **8 minutes**

Copy all files to the correct Google Drive folder. This single action triggers the entire automated chain via Make. Nothing else needs to happen manually until Step 3.

Audio file	Export WAV from DPS studio DAW if studio-recorded. Wireless GO II recording exported as WAV. Goes to `/MarinImmo/[Episode]/Raw/Audio/`
Video files	FX30 + ZV-1 II card dumps to `/MarinImmo/[Episode]/Raw/Video/`
B-roll	Separate folder `/Raw/Broll/` — DaVinci knows to pull from here for cutaways
Make trigger fires	New file detected in `/Raw/` → Auphonic API called automatically → processing begins

03 — AUDIO MASTERING

2

STEP 2 — AUTOMATIC

Auphonic masters the audio

Time: **0 minutes** — Make handles it

Auphonic runs automatically via the Make trigger. For Marina Immo Dubai content specifically, the Auphonic preset needs one additional parameter vs the standard DPS client preset: **noise reduction set to "High"** for Bali outdoor recordings (wind, motorbikes, pool ambient noise are all standard in field recordings).

Auphonic preset name	`MarinImmo_Field` for outdoor Bali recordings (High NR, -16 LUFS)
Auphonic preset name	`MarinImmo_Studio` for DPS studio recordings (Standard NR, -16 LUFS)
Output format	Mastered MP3 (podcast) + WAV (for DaVinci sync) → both to `/Processed/Audio/`
Bali-specific note	Pool, beach, and rice field ambient noise is not always a problem — sometimes it is atmosphere. Flag Auphonic at "Adaptive" not "Aggressive" for outdoor property walk-throughs where ambient sound adds context.

04 — FRENCH CONTENT GENERATION

3

STEP 3 — 5 MINUTES HUMAN EFFORT

Castmagic generates all French text content

Time: **5 minutes to upload + review** — then automatic

This is the most important customisation in the entire Marina Immo setup. Castmagic needs French-language custom prompts written specifically for real estate investment content. The default prompts produce generic English output. The custom prompts below produce ready-to-publish French content that matches the channel voice.

CASTMAGIC CUSTOM PROMPT 1 — YOUTUBE DESCRIPTION (FRENCH + SEO)

```
Tu es un expert en référencement YouTube francophone spécialisé dans
l'immobilier à Bali et Dubaï.

À partir de la transcription ci-dessous, rédige une description YouTube en
français de 250 mots maximum qui :
- Commence par la promesse principale de la vidéo (sans "Dans cette vidéo")
- Intègre naturellement ces mots-clés : immobilier Bali, investissement
Bali, rendement locatif Bali, acheter à Bali, propriété Bali
- Inclut 3 à 5 chapitres horodatés (exemple : 00:00 Introduction, 03:45
Analyse du marché...)
- Termine par un appel à l'action vers le Club Investisseurs et le Guide
Gratuit
- Ton : direct, honnête, expert — jamais promotionnel
```

CASTMAGIC CUSTOM PROMPT 2 — 10 INSTAGRAM/LINKEDIN CAPTIONS (FRENCH)

```
À partir de la transcription, génère 10 posts distincts en français pour
Instagram et LinkedIn.

Format pour chaque post :
— Accroche (1 phrase choc, jamais de question banale)
— Corps (3 à 5 insights actionnables tirés de la vidéo)
— Conclusion (vérité inconfortable OU chiffre surprenant)
— Call-to-action (lien en bio / commentez "BALI" pour recevoir le guide)
— 5 hashtags pertinents

Varier les formats : thread, liste numérotée, "ce qu'on ne vous dit pas",
"j'ai fait l'erreur de...", comparatif chiffré.
Ton : franc, sans langue de bois, comme quelqu'un qui a vraiment investi.
```

CASTMAGIC CUSTOM PROMPT 3 — WEEKLY NEWSLETTER PARAGRAPH (FRENCH)

À partir de la transcription, rédige un paragraphe de 150 mots pour la newsletter hebdomadaire "La Lettre de l'Investisseur".

Le paragraphe doit :
- Extraire L'insight le plus contre-intuitif ou surprenant de la vidéo
- Donner un chiffre concret ou une réalité de terrain
- Terminer par une question qui pousse à la réflexion
- Ton : celui d'un investisseur qui partage un café avec un ami, pas un article de presse

Ne pas commencer par "Dans notre dernière vidéo..." — commencer directement par l'insight.

CASTMAGIC CUSTOM PROMPT 4 — ENGLISH SUMMARY (FOR SUBTITLE BASE + ENGLISH AUDIENCE)

From the French transcript, generate a concise English summary of 100 words capturing the 3 key investment insights discussed.

This will be used as the English subtitle track description and to reach English-speaking investors who find the channel via YouTube search.

Tone: factual, data-driven, no hype. Focus on numbers, legal structures, and honest yield figures discussed.

Bilingual subtitle workflow	Castmagic generates French transcript → paste into DeepL API (or ChatGPT with translation prompt) → get English translation → add both .srt files to YouTube upload. French viewers get French CC. English viewers find the video via English keywords in the auto-translated captions.
Why this doubles your reach	YouTube's algorithm reads subtitle files for ranking. An English subtitle track means the video ranks for English Bali real estate searches AND French ones. A French-language video with English subtitles is genuinely unique in this niche.

05 — THE MASTER TEMPLATE

4

STEP 4 — 12 MINUTES — MOST IMPORTANT BUILD

DaVinci Resolve — Marina Immo Master Template

Time: **12 minutes per episode once template is built** (build time: ~3 hours, once)

The Marina Immo Dubai DaVinci template is separate from the DPS client template. It needs to reflect the channel's brand — not the studio's brand. Build it once, use it on every video forever. This is the element that will make the channel instantly recognisable and look more professional than 99% of real estate YouTube.

TEMPLATE COMPONENT: PROPERTY VISIT OVERLAY CARD — **Appears on screen during property walk-through**

This overlay card animates in (slide from left, 0.3s) when you cut to a new property. It gives viewers immediate context — price, yield, structure, area — without you having to say it. It is also the most shareable screenshot from your videos.

🏠 Propriété	**Villa Bingin — Uluwatu**
💰 Prix d'achat	**€ 245 000**
📊 Rendement projeté (agent)	**18% brut**
✅ Rendement réel estimé	**11–13% net**
📋 Structure juridique	**Leasehold 30+30 ans**
🌊 Distance plage	**8 min à pied**
⚠️ Mon verdict	**✓ Recommandé**

The "Mon verdict" line is the killer differentiator. No other channel does this. It is honest, visual, and immediately shareable on social media. Every viewer will screenshot it.

Intro sequence	5 seconds. Marina Immo Dubai logo reveal (gold wave animation). Location flag: 🇦🇪 + 🇮🇩. Tagline: "L'investisseur honnête." No music bed — immediate cut to face-to-camera hook.
Lower thirds	French text only. Format: [Speaker Name] · [Title in French]. Example: "Karim — Fondateur, Marina Immo Dubai". Gold underline bar. Appears at 3 seconds into any new person speaking.
Property overlay card	See above. Animates in at start of each property segment. Stays on screen 8 seconds then fades. Build as a Fusion macro in DaVinci — drag and drop to apply, just update text fields.
Chapter title cards	Full-screen black card, 2 seconds, gold text chapter number + title. Example: "Chapitre 2 : Les chiffres réels". Paste chapter titles from Castmagic output directly.

Verdict card (end of property)	Full-screen for 3 seconds: large "VERDICT" text, then either ✅ RECOMMANDÉ / ❌ DÉCONSEILLÉ / ⚠️ À SURVEILLER in colour-coded card. This is the moment designed to be clipped into a Reel.
Outro (last 20 seconds)	Two CTAs side by side: "Rejoignez le Club Investisseurs → [link]" and "Téléchargez le Guide Gratuit → [link]". End screen with subscribe button and "Prochaine vidéo" preview card.
Color grade preset	For Bali footage: warm colour grade (boost oranges, lift shadows slightly — the Bali light is already good). For DPS studio: cool, clinical grade (trust/authority feel for explainers). Two DaVinci LUT presets saved as `MID_Bali_Warm` and `MID_Studio_Cool`.
Subtitle track	French .srt file imported and burned-in as closed captions (not open captions) — viewers toggle on/off. English .srt also uploaded as second language track. DaVinci exports both simultaneously.
Export settings	4K H.265 / 25fps / 50 Mbps for YouTube. Separate 1080p export for Instagram Reels master source.

06 — REELS FACTORY

5

STEP 5 — 5 MINUTES UPLOAD + AUTOMATIC

Opus Clip — 5 Reels + YouTube Shorts from every video

Time: **5 minutes to upload · 0 minutes to wait**

Opus Clip's AI identifies the most engaging moments. For Marina Immo Dubai content, set the following custom instructions so Opus Clip prioritises the right moments — not generic "engaging" moments but the ones that are specifically compelling for a French real estate investment audience.

OPUS CLIP CUSTOM INSTRUCTIONS — MARINA IMMO DUBAI PROFILE

```
Channel language: French
Target audience: French-speaking investors interested in Bali and Dubai real estate
```

```
Prioritise clips that contain:
– A specific number (yield percentage, price, distance, ROI figure)
– A "truth reveal" moment (what the agent said vs reality)
– A verdict or recommendation (buy / avoid / watch)
– A legal structure explanation (PT PMA, leasehold)
– A surprising comparison (Dubaï vs Bali yield, projected vs actual)

Hook style for French audience:
– "Ce que personne ne vous dit sur..." (What nobody tells you about...)
– "J'ai visité X propriétés, voici la vérité..." (I visited X properties, here's the truth)
– "Le rendement réel après frais: X%" (The real yield after costs: X%)

Avoid clipping:
– Introductions and outros
– Transition moments without information
– Generic tourism commentary
```

Reels distribution	Instagram Reels (primary), TikTok (secondary, same content), YouTube Shorts (same clips — feeds YouTube algorithm separately from long-form).
From Lives specifically	Every YouTube Live (you already do these) → upload archive to Opus Clip → extract 5–8 Shorts. A 60-minute live becomes 6 pieces of stand-alone content automatically. Currently these lives are archived and never repurposed. That stops now.
Branding on Reels	Opus Clip adds Marina Immo Dubai logo + French subtitles automatically once the brand kit is configured. Set up once. Gold logo, dark background, French subtitle font matching DaVinci template.
Upload schedule	Do NOT post all 5 Reels on the same day. Schedule via Buffer or Later: 1 Reel every 2 days. A single 45-minute property visit video produces Reels content for 10 days across Instagram.

07 — THUMBNAIL SYSTEM

6

STEP 6 — 5 MINUTES PER VIDEO

Canva thumbnail kit — 6 templates for 6 content types

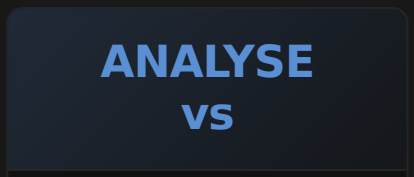

Time: **5 minutes** — swap photo + text, done

The Marina Immo Dubai thumbnail system has 6 templates — one per content series. Each template is designed for its specific emotional trigger. The investor audience clicks on different visual cues depending on what they're looking for: truth content triggers on a bold number, legal content triggers on a warning icon, property visits trigger on a beautiful property photo + price.

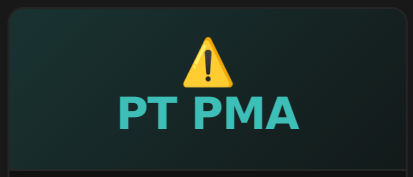

Template V — La Vérité

Red background, large number (the honest yield), your skeptical face in the corner. For truth/honest content series.

Template A — Analyse

Blue split-screen (Dubai flag / Bali flag). For comparison videos. Clean, data-focused visual.

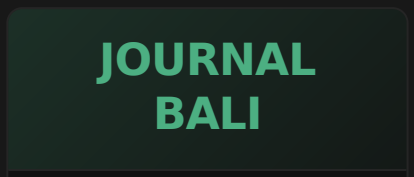

Template T — Terrain Juridique

Warning tone, yellow/amber. For legal structure and risk explainers. Authority feel.

Template C — Compte Rendu

Property photo + price badge + verdict icon. For property visit walk-through videos.

Template D — Diary

Cinematic wide crop of Bali location, title overlay. For the real-time diary series. Lifestyle feel.

Template L — Live Recap

For uploading clipped/edited Live summaries. Distinct from regular videos so returning audience knows the format.

The number rule	Every single thumbnail must contain at least one number. "Rendement 11%" beats "Mon expérience à Bali" by 300% in CTR for this audience. The investor brain clicks on data, not vague promises.
Face rule	Your face in the thumbnail increases CTR by 30–40% on average. Expression should match content: skeptical/raised eyebrow for truth content, confident/direct for analysis, curious for property visits. Never smiling blankly.
French text rule	Maximum 5 words on the thumbnail. Ideally 3. Large, bold, readable at 200×112px (mobile preview). Use "VÉRITÉ", "ARNAQUE", "CHIFFRES RÉELS", "ÉVITEZ ÇA" — strong verbs and nouns.

A/B testing	YouTube allows thumbnail A/B testing. For the first 20 videos: test two thumbnails per video (48-hour test). The data will tell you definitively whether the number-first or face-first approach wins for your specific audience.

08 — THE MAKE SCENARIO

7

STEP 7 — 0 MINUTES · FULLY AUTOMATIC

Make scenario: from Drive to published — zero human action

Time: **0 minutes** after one-time setup

This is a separate Make scenario from the DPS client pipeline. Marina Immo Dubai has its own automation chain. Once the 4K video, Castmagic outputs, and thumbnail are in the designated folders, Make does the rest.

📁

Trigger: New file in Google Drive

Watches folder `/MarinImmo/Processed/ReadyToPublish/`. Fires when the 4K video file lands there (placed manually after DaVinci export in Step 4). This is the human "approve" gate — nothing publishes until you deliberately move the video to this folder.

📋

Read Castmagic outputs

Make reads the matching Castmagic output files: `description_FR.txt`, `chapters.txt`, `tags_FR.txt`, `summary_EN.txt`. These were generated in Step 3 and saved to `/MarinImmo/Processed/[Episode]/Castmagic/`

▶️

Upload to YouTube with full metadata

Make uses the YouTube API module. Uploads the 4K video with: **French title** (from filename), **description** (Castmagic output), **chapters** (timestamps from Castmagic), **tags** (French SEO tags), **thumbnail** (pulled from `/Processed/[Episode]/Thumbnail/`), **both subtitle files** (FR + EN .srt). Sets visibility to **Scheduled** (you set the publish time in the filename: `…_PUBLISH20260615T0900`).

📱

Schedule Reels to Instagram via Buffer

Make reads the 5 Reels from `/Processed/[Episode]/Reels/`. Sends to Buffer API with captions (from Castmagic social posts output). Schedules one per day over 10 days. **Zero manual Instagram posting ever again.**

✉️

Draft newsletter in Beehiiv

Make creates a draft newsletter in Beehiiv using the newsletter paragraph from Castmagic (Prompt 3). Adds the YouTube video embed. Sets subject line to the video title. You receive a notification to review and hit send — 30 seconds of human effort.

Update Airtable content calendar

New row added to `MarinImmo_ContentCalendar` Airtable base: episode title, publish date, YouTube URL (once live), Reel schedule dates, newsletter sent date, views at 7 days, views at 30 days. Full visibility of your content pipeline and performance in one dashboard.

09 — WEEKLY CONTENT CALENDAR

3 videos a week. 35 minutes each.

At the current cadence (1–2 videos per month), the channel grows slowly regardless of quality. The pipeline enables 3 videos per week. Here is the weekly content structure — it does not require 3 trips to Bali per week. Most content can be made at the DPS studio in Dubai from research, analysis, and interview.

DAY	YOUTUBE	INSTAGRAM REELS	NEWSLETTER
Lundi	**Explainer / Vérité** Legal, yield breakdown, market analysis — filmed at DPS studio. Serie 2 or Serie 3.	Reel 1 from Thursday's video (from previous week) published.	—
Mercredi	**Property Visit / Terrain** Walk-through video from most recent Bali trip. Property overlay card, honest verdict. Serie 5 or Serie 6.	Reel 2 from Monday's video published. Reel from Monday's video scheduled.	—
Vendredi	**Opinion / Comparaison** Dubai vs Bali, market update, "what I've learned this week." Can be short (8–12 min). Filmed at DPS studio. Serie 4.	Reel from Wednesday published. Best Reel of the week boosted with €10 Meta spend.	**La Lettre de l'Investisseur** One insight from the week's best video. Beehiiv draft ready automatically. 30 sec to review and send.

Dimanche	🔴 **YouTube Live** 30–45 min Q&A + market update. Already part of your cadence. Archive → Opus Clip → 6 Shorts during the week.	Live announced on stories + posts.	—

THE MOST IMPORTANT RULE IN THE CALENDAR

Wednesday's property visit video does NOT require a trip to Bali that week. You film one trip's worth of properties (8–10 walk-throughs in 5 days), then process them over the following 10 weeks at one per week. **One Bali trip generates 10 weeks of property content.** Combined with the studio-filmed explainer and opinion videos, you never run out of content between trips.

10 — THE LIVE REPURPOSING SYSTEM

Your Lives are sitting idle. Not anymore.

You already run YouTube Lives. From the research: "🔴 LIVE (2) MARINA IMMO A BALI!" — these are 30–60 minute sessions that get archived and never touched again. Each one is a goldmine of short-form content that is currently being wasted.

After every Live	Download the archive from YouTube Studio. Upload to Opus Clip with the custom Marina Immo profile. Opus Clip extracts 6–8 Shorts (60–90 seconds each). These are your Reels + YouTube Shorts for the following week.
What Opus Clip looks for in Lives	In the custom profile: prioritise audience questions answered (high engagement moments), any specific number mentioned, any "myth busted" moment, any "I would never buy in X because..." moment. These are the clips that stop the scroll.
The "Q&A Clip" format	Best performing Live clips: question on screen as text overlay + your direct answer. Make creates a template: viewer's question appears at top of frame (white text on dark bg), your answer runs below. Castmagic generates French subtitle track automatically.
Weekly output from one Live	1 Live (40 min) → 6 Reels → published over 12 days. That single Live session contributes to Instagram feed content for nearly 2 weeks with zero additional filming.

11 — THE NUMBERS

What changes when you run the pipeline

VIDEOS / MONTH	REELS / MONTH	NEWSLETTER ISSUES / YEAR	PRODUCTION TIME / VIDEO
12–16	**60–80**	**52**	**35 min**
vs ~2 currently	incl. Live clips	weekly, auto-drafted	down from 3–5 hrs

CHANNEL VELOCITY IMPACT

YouTube's algorithm rewards consistency above almost everything else. At 3 videos/week, the channel sends 3× the signals to the algorithm compared to 1 video/week. **This is not a linear improvement — it is exponential.** Channels that go from 1/week to 3/week typically see subscriber growth rate triple within 60 days, not just because of volume but because the algorithm begins recommending the channel to new audiences it had previously deprioritised. The DPS pipeline makes 3/week sustainable without increasing your workload.

12 — SETUP CHECKLIST

Build this in one weekend.

The entire technical setup below takes one focused weekend. After that, every video costs 35 minutes. Here is the build sequence.

✓ **Day 1 Morning**	**Google Drive structure:** create all folders (`/MarinImmo/YYYY/[Episode]/Raw/` , `/Processed/` , `/ReadyToPublish/`). Set up sharing permissions for team member access if needed.
✓ **Day 1 Afternoon**	**Castmagic prompts:** create the 4 custom prompt templates above in Castmagic. Test with one existing video's transcript. Review and refine the French output. Save as "Marina Immo Dubai" preset.

✓ **Day 1 Evening**	**Auphonic presets:** create `MarinImmo_Field` and `MarinImmo_Studio` presets. Test with one Bali field recording. Check noise reduction level is appropriate.
◎ **Day 2 Morning**	**DaVinci Master Template:** build the Marina Immo Dubai template (3 hours). Lower thirds, property overlay card (Fusion macro), chapter title cards, verdict card, intro/outro. This is the longest build task but it is done once, forever.
◎ **Day 2 Afternoon**	**Canva thumbnail kit:** build the 6 templates (90 minutes). Brand kit: Marina Immo Dubai gold/teal palette, logo uploaded, font set. Each template: 15 minutes to build. Save as a Canva Brand Kit.
◎ **Day 2 Evening**	**Opus Clip brand kit + custom profile:** upload Marina Immo Dubai logo, set brand colours, write the custom instructions for clip selection. Test with one existing video.
○ **Day 3**	**Make scenario:** build the automation chain. Connect Google Drive → Auphonic API → Castmagic → YouTube API → Buffer → Beehiiv → Airtable. Test end-to-end with one video. This is the complex build — use the DPS team member who already manages the existing Make scenarios.
○ **Day 3 Evening**	**Beehiiv setup:** create the "La Lettre de l'Investisseur — Bali & Dubaï" newsletter. Import existing audience if any. Set up the Make webhook connection. Publish first issue manually to test the flow.
