INTERNAL OPERATIONS GUIDE — CONFIDENTIAL

THE STUDIO NETWORK FULL BUILD GUIDE

Step-by-Step Technical Setup — No Developer Required

Everything you need to build, launch, and run the matchmaking system from scratch — using four free tools, in under two days, with zero ongoing staff time.

DUBAI PODCAST STUDIO · MAY 2026 · VERSION 1.0

BEFORE YOU START

WHAT YOU ARE BUILDING & HOW IT ALL CONNECTS

The Studio Network is a **private, invitation-only matchmaking directory** for DPS clients. A member browses other creators, requests an introduction, and — if the other party accepts — both receive a direct booking link to DPS. The session gets booked, both get 50 AED credit, and the connection is recorded in their profiles.

You will use **four tools**. Each has one job:

TOOL 01 — DATABASE

Airtable

Stores every member profile, every connection request, and every completed session. The directory members browse is an Airtable view embedded into your Wix site.

`airtable.com → free account`

TOOL 02 — FORMS

Tally

Two forms: one for members to create their profile after their session, one for requesting an introduction. Free, no branding, embeds cleanly in Wix.

`tally.so → free account`

TOOL 03 — AUTOMATION

Make (formerly Integromat)

The engine that connects everything. When a booking happens in Wix, Make fires a chain of actions: adds to Airtable, sends emails, generates codes. All automatic.

`make.com → free account`

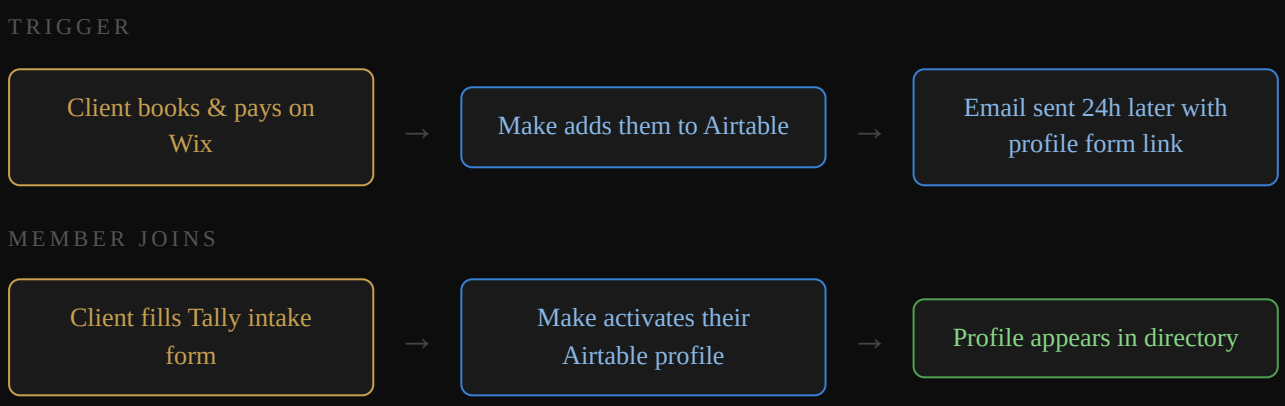

TOOL 04 — MEMBER PORTAL

Wix Members (already on your site)

The password-protected page where members log in to browse the directory. Already built into your existing Wix subscription — no extra cost, no new platform.

`Your existing Wix dashboard`

THE COMPLETE FLOW — END TO END

CONNECTION MADE

Member A clicks "Invite to record" → Make emails Member B to accept/decline → On accept: both get DPS booking link + 50 AED code

SESSION CONFIRMED

Booking made using network code → Make updates both profiles → Connection counter incremented. Loop repeats.

TIME TO BUILD

Allow **6–8 hours total** across two sittings. Day 1: Airtable + Tally (3 hours). Day 2: Make automations + Wix page (3–4 hours). One person can do all of this. No coding. No developer.

CHAPTER 01

BUILDING THE DATABASE

Set up Airtable as the brain of the system — every member, every connection, every session tracked automatically.

CHAPTER 01

AIRTABLE — THE DATABASE

1 Create Your Airtable Account & Base

10 MINUTES

1. Go to **airtable.com** and click **Sign up for free**
2. Use your work email (info@dubaipodcaststudio.com or a team address)
3. Once inside, click the **+ Add a base** button
4. Choose **Start from scratch**
5. Name the base: **Studio Network**
6. You will land on a blank table called "Table 1" — rename it by double-clicking the tab: call it **Members**

> **Tip:** Airtable automatically creates 3 sample fields (Name, Notes, Attachments). You will delete Notes and Attachments and build the full field list in the next step.

2 Build the Members Table — All Fields

30 MINUTES

Click the **+** button at the end of the column headers to add each new field. Set the field type exactly as shown below.

FIELD NAME	FIELD TYPE	SETTINGS / OPTIONS
`Name` ★	Single line text	Already exists — keep it
`Email` ★	Email	—
`Phone`	Phone number	—
`Podcast Name`	Single line text	—
`Industry`	Single select	Options: Business · Finance · Real Estate · Health & Wellness · Tech · Media · Culture · Sports · Coaching · Other
`Languages`	Multiple select	Options: English · Arabic · French · Hindi · Urdu · Russian · Other
`Available as Guest`	Checkbox	—
`Guest Topics`	Long text	—
`Profile Link`	URL	Podcast, Instagram, LinkedIn or YouTube
`Instagram`	Single line text	—
`Bio`	Long text	—
`Photo`	Attachment	—
`Session Date`	Date	Date format: DD/MM/YYYY
`Studio Used`	Single select	Options: DPS1 · DPS2 · DPS3 · YALLAPOD1 · YALLAPOD2 · YALLAPOD3 · YALLAPOD4

FIELD NAME	FIELD TYPE	SETTINGS / OPTIONS
`Profile Status`	Single select	Options: Pending · Active · Inactive. Set default to: Pending
`Connections Made`	Number	Default value: 0
`Sessions via Network`	Number	Default value: 0
`Member Since`	Date	—
`Airtable Record ID`	Formula	Formula: `RECORD_ID()` — this auto-generates a unique ID for each row, used by Make for lookups

> **The ★ fields are the only required ones.** All others are filled in gradually as members complete their profiles. Do not make fields required in Airtable itself — Make will handle validation.

3 Create the Connections Table

15 MINUTES

Click the **+** tab next to "Members" at the bottom of the screen to add a second table. Name it **Connections**. Build these fields:

FIELD NAME	FIELD TYPE	NOTES
`Connection ID`	Autonumber	Auto-increments with each new connection. Used to generate unique discount codes.
`Requester Name`	Single line text	—
`Requester Email`	Email	—
`Recipient Name`	Single line text	—
`Recipient Email`	Email	—
`Episode Idea`	Long text	What the requester wants to discuss
`Status`	Single select	Options: Pending · Accepted · Declined · Session Booked · Completed. Default: Pending
`Request Date`	Date	—
`Discount Code`	Single line text	Auto-filled by Make — e.g. NETWORK-042
`Code Redeemed`	Checkbox	Checked by Make when the code is used

4 Create the Directory View (What Members See)

15 MINUTES

In the **Members** table, you will create a Gallery view — this is the visual directory that gets embedded in your Wix page.

1. Click **+ Add view** in the left sidebar of Airtable
2. Select **Gallery**
3. Name the view: **Active Directory**
4. Click **Filter** → Add filter → **Profile Status** → **is** → **Active**
5. Add a second filter → **Available as Guest** → **is checked**
6. Set the card cover image to the `Photo` field
7. Under **Fields**, show only: Name, Podcast Name, Industry, Languages, Bio, Profile Link. Hide all other fields.
8. Click **Share view** → enable **Allow anyone with this link to see this view** → copy the embed link

> **Important:** The Airtable embed shows the directory but does NOT expose private information (email, phone) — only the fields you chose to display. Members' contact details stay internal.

CHAPTER 02

BUILDING THE FORMS

Two Tally forms handle all member input — the profile intake and the introduction request.

CHAPTER 02

TALLY — THE TWO FORMS

5 Create Your Tally Account

5 MINUTES

1. Go to **tally.so** and click **Sign up free**
2. Use the same work email as Airtable
3. Click **+ New form** to begin

6 Build Form 1 — Member Profile Intake

30 MINUTES

This form is sent to every client 24 hours after their session. It creates their Studio Network profile. Name the form: **Studio Network — Join the Directory**

#	QUESTION / FIELD	TYPE	REQUIRED
—	*Welcome block: "You recorded at Dubai Podcast Studio — which means you are now eligible to join The Studio Network. Fill in your profile below to be discovered by other DPS creators looking for guests."*	Text block	—
1	Your full name	Short text	Yes
2	Your email address	Email	Yes
3	Your podcast or show name (leave blank if you don't have one yet)	Short text	No
4	Your industry or niche	Dropdown	Yes
5	Languages you speak	Multiple choice (checkboxes)	Yes
6	Are you available to be a guest on other people's podcasts?	Yes / No toggle	Yes
7	If yes — what topics can you speak about? (shown only if Q6 = Yes)	Long text	Conditional
8	Link to your podcast, Instagram, YouTube or LinkedIn	Short text	No
9	Your Instagram handle (optional)	Short text	No
10	A short bio — max 150 characters. This is what other members will see first.	Long text (set max characters to 150)	Yes
11	Upload a profile photo	File upload	No
12	I agree to be listed in the private Studio Network directory, visible only to verified DPS clients.	Checkbox consent	Yes

After building all fields, go to **Settings → Integrations → Webhooks** and copy the webhook URL — you will need this in Make (Chapter 4, Step 12).

Conditional logic for Question 7: In Tally, click on Question 7 → click the logic icon → set condition: "Show this question if Question 6 = Yes." This way the topics field only appears for people who want to be guests.

7 Build Form 2 — Introduction Request

20 MINUTES

This form appears when a member clicks **"Invite to record together at DPS"** next to someone's profile in the directory. Name it: **Studio Network — Introduction Request**

#	QUESTION / FIELD	TYPE	NOTES
—	*Header: "You are about to invite [Recipient Name] to record a podcast episode together at Dubai Podcast Studio."*	Text block	Recipient name pre-filled via URL parameter — see Step 16
1	Your name	Short text, required	Pre-filled from Wix member session if possible
2	Your email	Email, required	—
3	Your podcast or show name	Short text	—
4	Who are you inviting? (recipient name)	Hidden field	Pre-filled via URL parameter `?recipient_name=`
5	Recipient email	Hidden field	Pre-filled via URL parameter `?recipient_email=`
6	Why do you want to record with this person? What episode do you have in mind? (This message is sent to them.)	Long text, required	This becomes the body of the notification email to the recipient

Go to **Settings → Integrations → Webhooks** and copy this form's webhook URL separately. Label it "Introduction Request Webhook" in your notes.

> **Hidden fields with URL parameters:** In Tally, click **+ Add block → Hidden fields**. Name each one to match the URL parameter key (e.g. `recipient_name`, `recipient_email`). When you link to this form with those parameters in the URL, Tally captures them silently — the member never sees them.

8 Build Form 3 — Accept / Decline Response

10 MINUTES

This is the simplest form. The recipient receives an email, clicks a link, and lands on this page. Name it:

Studio Network — Accept Invitation

1. Add a text block: *"[Requester Name] wants to record a podcast episode with you at Dubai Podcast Studio. Here is what they said: [Episode Idea]. Do you accept?"*
2. Add a hidden field: `connection_id` (pre-filled via URL)
3. Add a hidden field: `response` (pre-filled as either "accepted" or "declined" via two separate links in the email)
4. Add a hidden field: `recipient_email`
5. Add a text block for accepted response: *"Thank you — you will receive a booking link within minutes."*

> **Two links, one form:** You will create two different URLs for the same form — one with `?response=accepted` and one with `?response=declined`. Each button in the notification email points to one of these URLs. When submitted, Make reads the hidden `response` field and fires the correct action.

CHAPTER 03

SETTING UP THE WIX MEMBER PORTAL

Create the private, members-only page where DPS clients log in to browse the directory and send introduction requests.

CHAPTER 03

WIX — THE MEMBER PORTAL

9 Enable Wix Members on Your Site

10 MINUTES

1. Log into your **Wix dashboard**
2. In the left sidebar click **Members & Contacts → Members**
3. Click **Enable Members Area** — Wix will add a login/signup flow to your site automatically
4. Go to your site editor and locate the Members Area pages — Wix creates a **/members** section automatically
5. In the editor, add a new **blank page** and name it: **The Studio Network**
6. Set the URL slug to: **/studio-network**
7. Go to page settings → **Permissions** → set to **Members only**

WHAT "MEMBERS ONLY" MEANS

Only people with a Wix Members account on your site can access this page. You will control who gets an account — only verified DPS clients receive the invitation (sent automatically by Make). Anyone who tries to access the URL without being logged in sees a login wall.

10 Build the Studio Network Page in Wix

40 MINUTES

Inside the Wix editor on your new **/studio-network** page, add these elements in order:

1. **Header text:** "The Studio Network — Members Only" in your brand font
2. **Intro paragraph:** "Browse DPS creators available as podcast guests. Find your next episode. Click 'Invite to Record' to send an introduction request — if they accept, you will both receive a DPS booking link and 50 AED studio credit."
3. **Add an HTML iframe element** (in Wix editor: Add → Embed → HTML iFrame)
4. Paste the Airtable Active Directory embed link from Step 4 into the iframe source
5. Set iframe height to at least 800px so the gallery displays fully
6. **Add a second section below the directory:** "Want to invite someone you found? Click below to send an introduction request."
7. **Add a button:** "Send Introduction Request" — link this button to your Tally Form 2 URL
8. **Add a FAQ section:**
    - *Q: Who can see my profile?* A: Only verified DPS clients who have completed at least one session.
    - *Q: How does the 50 AED credit work?* A: When an introduction leads to a booked session, both parties receive a 50 AED discount code automatically by email.
    - *Q: Can I remove myself from the directory?* A: Yes — email info@dubaipodcaststudio.com at any time.

> **Airtable embed and Wix:** Some Wix templates block external iframes by default. If the embed does not appear, go to your Wix dashboard → Settings → Advanced → and ensure "Allow external scripts and embeds" is enabled. If the issue persists, use the Wix HTML Embed widget instead of the standard iFrame widget.

11 Set Up the Introduction Request Button with Pre-Filled Parameters

20 MINUTES

The "Invite to Record" button next to each profile must pass the recipient's name and email to the Tally form automatically. Since the Airtable gallery is embedded as an iframe, the simplest approach is a single shared button that opens a Tally form the user fills manually.

For a more advanced setup where each profile has its own pre-filled link: add a `Tally Link` field in Airtable (Formula type) with this formula:

```
-- Airtable Formula field: Tally Link --
"https://tally.so/r/YOUR_FORM_ID?recipient_name=" & ENCODE_URL_COMPONENT({Name}) &
"&recipient_email=" & ENCODE_URL_COMPONENT({Email})
```

This generates a unique Tally link for each member. Show this field in the Airtable gallery view as a **button** labeled "Invite to Record Together at DPS →". Replace `YOUR_FORM_ID` with the actual ID from your Tally Form 2 URL.

> **To find your Tally form ID:** Open Form 2 in Tally. The URL will look like `tally.so/r/abcXYZ` — the ID is the part after `/r/`.

CHAPTER 04

BUILDING THE AUTOMATIONS

Five Make scenarios that run every process automatically — from new booking to completed session — without any human intervention.

CHAPTER 04

MAKE — THE FIVE AUTOMATION SCENARIOS

Go to **make.com**, create a free account, and click **+ Create a new scenario** for each of the five flows below. Each scenario has one trigger and one or more actions.

12 Scenario 1 — New Booking → Airtable + Delayed Invite Email

45 MINUTES

What it does: When a client completes a booking on Wix, Make adds them to Airtable and schedules the Studio Network invitation email for 24 hours later.

Trigger setup in Wix first:

1. In your Wix dashboard, go to **Automations** → **+ New Automation**
2. Trigger: **Booking Confirmed**
3. Action: **Send a webhook**
4. In Make, create a new scenario → choose **Webhooks** → **Custom Webhook** as the trigger module
5. Make generates a webhook URL — copy it
6. Paste the Make webhook URL into the Wix automation webhook field
7. Save the Wix automation → it will now send booking data to Make on every confirmation

Make scenario — modules in order:

1. **Trigger:** Webhooks → Custom Webhook (receives Wix booking data)
2. **Action:** Airtable → Create a Record → Table: Members
    - Map `Name` → Wix booking field: customer name
    - Map `Email` → Wix booking field: customer email
    - Map `Phone` → Wix booking field: customer phone
    - Map `Session Date` → Wix booking field: booking date
    - Map `Studio Used` → Wix booking field: service/resource name
    - Set `Profile Status` → Pending (hardcoded)
    - Set `Member Since` → current date
3. **Action:** Tools → Sleep → Duration: 86400 seconds (= 24 hours)
4. **Action:** Gmail (or any email module) → Send an Email

INVITE EMAIL — SENT 24 HOURS AFTER SESSION

Subject: You're invited to The Studio Network — Dubai Podcast Studio

Hi **{{Name}}**,

Thank you for recording with us yesterday. We hope the session went well.

Because you are now a verified Dubai Podcast Studio client, you are invited to join **The Studio Network** — our private directory of DPS creators.

Inside you can:

→ Be discovered as a podcast guest by other DPS creators
→ Find the perfect guest for your next episode
→ Book a co-recording session and earn 50 AED studio credit

Create Your Profile →

It takes 3 minutes. Access is exclusive to verified DPS clients only.

See you back in the studio,
Dubai Podcast Studio Team

> **On the Sleep module:** Make's free tier allows scenarios to run for up to 40 minutes. For a 24-hour delay you need a paid plan (from ~$9/month) or an alternative: use Google Sheets as a scheduler — Make writes a row at booking time with a "send at" timestamp, and a separate daily scenario checks the sheet and sends emails when the time arrives. This works on the free tier and is explained in the appendix.

13 Scenario 2 — Profile Form Submitted → Activate Airtable Profile

25 MINUTES

What it does: When a client submits the Tally intake form, Make finds their Airtable record and activates their profile so it appears in the directory.

1. **Trigger:** Webhooks → Custom Webhook → paste the Tally Form 1 webhook URL from Step 6
2. **Action:** Airtable → Search Records → Table: Members → Filter: Email = `{{form.email}}`
3. **Action:** Airtable → Update a Record → use the Record ID from the search result
    - Map all form fields to their Airtable equivalents
    - Set `Profile Status` → Active
4. **Action:** Gmail → Send Email → welcome confirmation to the member

WELCOME EMAIL — SENT IMMEDIATELY AFTER PROFILE SUBMISSION

Subject: Your Studio Network profile is live ✓

Hi **{{Name}}**,

Your profile is now live in The Studio Network. Other DPS creators can now find you and invite you to record together.

You can browse the directory and send your own introduction requests here:

Browse The Directory →

When an introduction leads to a booked session, you will automatically receive 50 AED studio credit.

Dubai Podcast Studio Team

14 Scenario 3 — Introduction Request → Notify Recipient

30 MINUTES

What it does: When a member submits the Introduction Request form, Make creates a connection record in Airtable and sends a notification email to the recipient with Accept and Decline links.

1. **Trigger:** Webhooks → Custom Webhook → paste the Tally Form 2 webhook URL from Step 7
2. **Action:** Airtable → Create a Record → Table: Connections
    - Map `Requester Name`, `Requester Email`, `Recipient Name`, `Recipient Email`, `Episode Idea` from form fields
    - Set `Status` → Pending
    - Set `Request Date` → current date
3. **Action:** Gmail → Send Email to `{{recipient_email}}`

RECIPIENT NOTIFICATION — SENT IMMEDIATELY ON REQUEST

Subject: Someone from The Studio Network wants to record with you

Hi **{{recipient_name}}**,

{{requester_name}} found your profile in The Studio Network at Dubai Podcast Studio and wants to record a podcast episode with you.

Here is what they have in mind:

> ***{{episode_idea}}***

If you accept, you will both receive a direct booking link to DPS and a 50 AED studio credit.

Accept & Get Booking Link →

Not interested? Decline here.

This invitation expires in 7 days.

Dubai Podcast Studio Team

Replace {{connection_id}} in the email links: In Make, the Airtable Create Record action returns the new record's ID. Map this value into the URL you build for the Accept and Decline links. Make has a "Text Aggregator" or you can build the URL directly in the email body using Make's variable mapping.

15 Scenario 4 — Introduction Accepted → Send Booking Link + Credit Codes

30 MINUTES

What it does: When the recipient clicks Accept, Make updates the connection status, generates a unique discount code, and sends both parties the DPS booking link with their credit.

1. **Trigger:** Webhooks → Custom Webhook → paste the Tally Form 3 webhook URL
2. **Router module:** Split based on the `response` field
   - Route A: `response = accepted` → proceed
   - Route B: `response = declined` → update status to Declined, send a polite decline notification to requester, end scenario
3. **Action (Route A):** Airtable → Update Connection Record → Status: Accepted
4. **Action:** Tools → Set Variable → generate discount code: `NETWORK-{{connection_id}}`
5. **Action:** Airtable → Update Connection Record → Discount Code: `NETWORK-{{connection_id}}`
6. **Action:** Wix → Create Coupon (via Wix API or manually) for 50 AED — code: `NETWORK-{{connection_id}}`
7. **Action:** Gmail → Send Email to BOTH requester and recipient

INTRODUCTION CONFIRMED — SENT TO BOTH PARTIES

Subject: Your introduction is confirmed — here is your booking link

Hi **{{name}}**,

Your connection through The Studio Network has been confirmed. **{{other_party_name}}** has accepted.

Book your session together at the link below. Your **50 AED studio credit** is already built in — use code **NETWORK-{{connection_id}}** at checkout.

Book Your Session Together at DPS →

Discount code: **NETWORK-{{connection_id}}** (50 AED off, valid 30 days)

Both parties must book the same session slot. If you need help coordinating, reply to this email.

We look forward to seeing you both in the studio.

Dubai Podcast Studio Team

> **Creating Wix coupons via automation:** Wix supports coupon creation through its API. This requires generating an API key from your Wix dashboard (Settings → API Keys → Generate Key). In Make, use the HTTP module to call the Wix Coupons API. If this feels too technical initially, create a batch of 50 generic codes manually in Wix (e.g. NETWORK-001 through NETWORK-050) and have Make select and assign the next unused code from an Airtable "Codes" table. Simpler and works on the free tier.

16 Scenario 5 — Discount Code Redeemed → Complete the Connection

20 MINUTES

What it does: When a NETWORK- code is used in a Wix booking, Make marks the connection as completed and increments both members' session counters.

1. **Trigger:** Webhooks → Custom Webhook from Wix (set up a second Wix Automation: trigger = "Booking Confirmed where coupon code starts with NETWORK-")
2. **Action:** Airtable → Search Records → Table: Connections → Filter: Discount Code = `{{coupon_code_used}}`
3. **Action:** Airtable → Update Connection Record → Status: Completed, Code Redeemed: checked
4. **Action:** Airtable → Search Records → Table: Members → Filter: Email = requester email → Update: Sessions via Network + 1
5. **Action:** Airtable → Search Records → Table: Members → Filter: Email = recipient email → Update: Sessions via Network + 1
6. **Action:** Gmail → Send Email to both: "Your Studio Network session is confirmed — see you in the studio."

> **Incrementing a number in Airtable via Make:** Make's Airtable module does not auto-increment. Use this workaround: (1) Search for the member record, (2) read the current value of Sessions via Network, (3) in the Update Record step, set the field to `{{current_value + 1}}` using Make's math function.

CHAPTER 05

TESTING THE FULL SYSTEM

Run the complete flow end-to-end before going live. Every step must be verified.

CHAPTER 05

END-TO-END TESTING CHECKLIST

Use two test email addresses (e.g. a personal Gmail and a colleague's email) to simulate Member A and Member B. Complete every check before sending the system live to clients.

PHASE 1 — NEW BOOKING FLOW

- [ ] **Make a test booking in Wix** using Test Email A. Confirm the booking completes normally.
- [ ] **Check Airtable** → a new row should appear in the Members table within 60 seconds. Status should be: Pending.
- [ ] **Check the invitation email** arrives at Test Email A after the delay. Verify all variables (name, form link) display correctly.

PHASE 2 — PROFILE CREATION FLOW

- [ ] **Click the form link** in the invitation email. Fill in all fields for Member A including a photo. Submit.
- [ ] **Check Airtable** → the Member A row should now show all form data. Status should change to: Active.
- [ ] **Check the welcome email** arrives at Test Email A. Verify the directory link works.
- [ ] **Log into the Wix member portal** and navigate to /studio-network. Verify the Airtable directory iframe loads and Member A's profile is visible.
- [ ] **Repeat the above for Member B** (Test Email B) — make a second test booking, activate their profile.

PHASE 3 — INTRODUCTION REQUEST FLOW

- [ ] **As Member A**, click "Invite to Record Together" next to Member B's profile in the directory. Fill and submit the Introduction Request form.
- [ ] **Check Airtable Connections table** → a new connection row should appear. Status: Pending.
- [ ] **Check Test Email B** receives the notification email with the episode idea message and two buttons: Accept and Decline.
- [ ] **Click Accept.** Verify the Tally Form 3 confirmation page loads correctly.
- [ ] **Check Airtable Connections** → Status should update to Accepted. Discount Code field should contain NETWORK-[number].
- [ ] **Check both Test Email A and Test Email B** receive the introduction confirmed email with the booking link and discount code.

PHASE 4 — BOOKING COMPLETION FLOW

- [ ] **Make a test booking in Wix** using the discount code from the introduction email. Verify the code applies at checkout.
- [ ] **Check Airtable Connections** → Status: Completed. Code Redeemed: checked.
- [ ] **Check Airtable Members** → Sessions via Network counter incremented by 1 for both Member A and Member B.
- [ ] **Check both test emails** receive the session confirmation email.

ALL CLEAR?

If every checkbox above is ticked, the system is working end-to-end. You are ready to launch. If any step fails, go back to the relevant Make scenario and check that all field mappings are correct. The most common issues are: (1) a Tally webhook URL not saved correctly in Make, and (2) an Airtable field name mismatch between what Make sends and what Airtable expects.

CHAPTER 06

LAUNCHING TO 3,500 PAST CLIENTS

The seed message that activates the network from day one.

CHAPTER 06

THE SEED LAUNCH

17 The WhatsApp Broadcast — Send This Week

2 HOURS TO PREPARE · 1 SEND

Export your full past client list from Wix (Contacts → Export). Send the following message via WhatsApp broadcast to every client who has a phone number on record. WhatsApp Business allows broadcasts to up to 256 contacts per list — split into batches if needed.

WHATSAPP BROADCAST MESSAGE (ENGLISH)

Hi [First Name],

Because you recorded at Dubai Podcast Studio, you are now invited to join **The Studio Network** — our private directory for DPS creators.

Inside you can find podcast guests from our community of 3,500+ professionals from 75 countries — and be discovered yourself.

Join in 3 minutes: [TALLY FORM 1 LINK]

Access is exclusive to verified DPS clients. No cost.

— Dubai Podcast Studio Team

WHATSAPP BROADCAST MESSAGE (ARABIC)

مرحباً [الاسم]،

بما أنك سجّلت في Dubai Podcast Studio، يسعدنا دعوتك للانضمام إلى **Studio Network** — دليلنا الخاص بمبدعي DPS.

ستتمكن من العثور على ضيوف لبودكاستك من مجتمعنا الذي يضم أكثر من 3500 محترف من 75 دولة — وأن تُكتشف أنت أيضاً.

انضم في 3 دقائق: [رابط النموذج]

— فريق Dubai Podcast Studio

> **Expected response rate:** A warm list of people who already know and trust DPS should see a 15–25% completion rate. On 3,500 past clients that is 525–875 initial members. Even at the low end, a 500-person network from day one is meaningful — and it grows automatically with every new booking from that point forward.

18 Ongoing — What Happens Without Any Action from the Team

ZERO ONGOING EFFORT

Once the system is live and the seed broadcast is sent, the following happens automatically every week without any staff involvement:

- → Every new Wix booking triggers Scenario 1 → client added to Airtable → invitation email scheduled
- → Every profile form submission triggers Scenario 2 → profile activated → appears in directory
- → Every introduction request triggers Scenarios 3 and 4 → recipient notified → booking link and credit sent automatically
- → Every network booking triggers Scenario 5 → profiles updated → connection marked complete

WEEKLY ADMIN — 20 MINUTES MAXIMUM

Once per week, open Airtable and check the Members table for any Pending profiles that are more than 7 days old (clients who received the invitation but never completed the form). Send a single WhatsApp follow-up to those clients. That is the full extent of manual work required to run the network.

SUMMARY

TOTAL COST, TIME & TOOLS

TOOL	FREE TIER LIMIT	COST TO SCALE	WHEN YOU HIT THE LIMIT
Airtable	1,000 records / base	~360 AED/month (unlimited records)	After ~700 active members
Tally	Unlimited responses forever	Free (basic use)	Never, for this use case

TOOL	FREE TIER LIMIT	COST TO SCALE	WHEN YOU HIT THE LIMIT
Make	1,000 operations/month	~170 AED/month (10,000 ops)	After ~200 introductions/month
Wix Members	Included in your plan	0 AED	Never
Gmail (sending)	Included in Google account	0 AED	Never, for this volume
Total to launch	**0 AED**		**~530 AED/month at full scale**

PHASE	TASK	TIME REQUIRED
Day 1 — Morning	Airtable setup (Steps 1–4)	2.5 hours
Day 1 — Afternoon	Tally forms (Steps 5–8)	1.5 hours
Day 2 — Morning	Wix member portal (Steps 9–11)	1.5 hours
Day 2 — Afternoon	Make automation scenarios (Steps 12–16)	3 hours
Day 3	Full end-to-end testing (Step 17 checklist)	2 hours
Day 4	Seed broadcast to past clients (Step 18)	2 hours
Total build time	**—**	**~12 hours across 4 days**

IF YOU GET STUCK

The three most common points of friction are: (1) **Make webhook mapping** — if data from Wix or Tally is not reaching Airtable, click "Run once" in Make and check what the webhook receives. The field names must match exactly. (2) **Airtable iframe in Wix** — if the embed is blank, check that the Airtable share view is set to "Anyone with the link" and that Wix allows external embeds. (3) **Hidden fields in Tally** — test your URL

parameters by pasting the full link into a browser and submitting the form. Check that hidden values appear in Tally's submission log.
